Czech manufacturer of medical plasters

CATALOG OF PRODUCTS

Medioplast CZ, výrobní družstvo

Czech manufacturer of medical plasters

All our products are manufactured using modern and ecological production technology on the basis of hot-melt adhesives. Apart from the ecological aspect, the greatest advantage of this technology, for example in comparison with the dissolvent technology, is the reduction of skin irritation risks to practically zero as has been confirmed by test results.

We manufacture three basic types of plasters differing from each other by the supporting material for the applied adhesive film.

MEDIPLAST – fabric plasters without wound pads, with wound pads and **fabric tape plasters suitable for fixing joints** (sport, rehabilitation of the locomotive apparatus)

MEDIPOR – non-woven fabric plasters without and with a wound pad

MEDISTRIP, MEDIPLAST F – washable foil plasters with a wound pad

In addition to the standard product range offered on reels or tubes and plasters with an absorbent insertion, we are also prepared - after consulting the customer - to produce non-standard windings from fabric as well as from non-woven fabric or foil.

Rem:

Plasters in clinical package are intended for medical institutions and individual pieces and kinds of these plasters are not equipped with notation by course of law number 58/2005 Sb. (Czech legislation). Course of law are fulfilled in notation on folders their group packing.

MEDIPLAST – Textile plasters

Plasters on the reel

Textile plaster, on reel with cover.
In PP euro bag.
